

# Restraining the Pig

Preparing for anesthetic protocol

# Use a Hog Snare!

- Place the snare loop in the mouth and over the top jaw and snout of the pig, with the snare handle held vertically in the other hand
- Move the loop as far back in the mouth as possible before tightening it
- Hold the snare securely

# Anesthetic Protocol and Aftermath!

- The restrainer will have a firm hold on the animal.
- Anesthetic protocol will be administered.
- The animal should be positioned in such a way that it falls on a garbage bag. Where the surgery will take place.
- More often, surgeries with large, food animals occur **ON THE FARM!**
