Pre op Considerations

Palmar Digital Neurectomy

1

NSAIDs should be administered pre operatively and Post operatively.

Tetanus Prophylaxis is recomended

3

Clip the area of the surgical incision and prepare in a routine manner

5

An additional drape should be positioned to minimize suture contamination. This can be on the ground for standing procedures or upper limb and below the limb for recumbent procedures,

2

Local Anesthetic injected at the level of the abaxial sesamoid may be used in the standing patient.

4

Hoof should be covered with a sterile drape
